NOTICE OF APPEAL

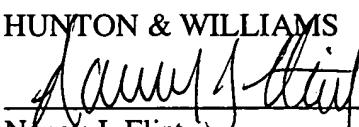

Sir:

In accordance with 37 C.F.R. § 1.191, the Applicants hereby appeal to the Board of Patent Appeals and Interferences from the decision of the Supervisory Patent Examiner, mailed September 11, 2002, rejecting claims 1, 4, 10, 11, 13, 15, 17 and 21 in the above-captioned patent application.

Applicant authorizes the fee of \$320.00 for the Notice of Appeal, along with the fee of \$930.00 for a three month extension of time, to be charged to Deposit Account No. 50-0206.

Respectfully submitted,

HUNTON & WILLIAMS

AMENDMENT AFTER FINAL REJECTION UNDER 37 C.F.R. § 1.116

Sir;

In response to the Office Action mailed on September 11, 2002 in the above-identified application, Applicants respectfully request that this Amendment after Final Rejection be entered, and that the application be reconsidered in view of the remarks that follow:

AMENDMENTS

In the Claims

Please amend claims 1, 15 and 21. A clean version of the amended claims is set forth below.

1. (Three times amended) A system for depositing the value associated with conventional checks into the bank account of a customer payee comprising:

RECEIVED
NOV 12 2003
GROUP 3600

an interface to a customer terminal, the customer terminal being located remotely from a bank;

an automated banking system connected to the customer terminal interface via a communication link, the automated banking system being located remotely from the customer terminal interface; and

an interface to a check clearing system, the check clearing system connected to the automated banking system via a communication link, the check clearing system being located remotely from the automated banking system, wherein the automated banking system is configured such that information from a conventional check is entered into the customer terminal, and wherein the automated banking system and check clearing system are configured to effectuate deposit of the discrete value of each check into an account of the customer payee.

15. (Three times amended) A method for allowing a bank customer to deposit the value of conventional checks into a bank account from a location that is remotely situated with respect to a bank, comprising:

- (a.) receiving conventional checks payable to a bank customer payee;
- (b.) logging the bank customer payee onto an automated banking system from a customer terminal that is remotely situated with respect to a bank and the automated banking system;
- (c.) entering transaction data into the customer terminal;

PATENT
Attorney Docket No. 47004.000059

(d.) processing the discrete value of each check for deposit by the automated banking system; and

(e.) receiving a result of the transaction for each check.

21. (Three times amended) A method for allowing a bank to process check deposit transactions that are initiated by a bank customer at a remote location, comprising:

(a.) receiving a request from a bank customer on a terminal that is remotely situated from a bank for authorization to make a transaction using an automated banking system, wherein the terminal is remotely situated from the automated banking system;

(b.) authorizing a bank customer payee as a user on the automated banking system;

(c.) receiving transaction data related to the deposit of a conventional check payable to the bank customer, where the payor is someone other than the bank customer; and

(d.) processing the transaction for the discrete value of each check.

Marked-up versions of the amended claims detailing insertions and deletions, as required pursuant to 37 C.F.R. 1.121(c)(ii), are included as an Appendix separate from and attached to this Amendment.

Please add the following claims:

50. A system for depositing the value associated with conventional checks into the bank account of a customer payee comprising:

an interface to a customer terminal, the customer terminal being located remotely from a bank, wherein the customer payee controls access to the customer terminal ;

an automated banking system connected to the customer terminal interface via a communication link, the automated banking system being located remotely from the customer terminal interface; and

an interface to a check clearing system, the check clearing system connected to the automated banking system via a communication link, the check clearing system being located remotely from the automated banking system, wherein the automated banking system is configured such that information from a conventional check is entered into the customer terminal, and wherein the automated banking system and check clearing system are configured to effectuate deposit of the discrete value of each check into a demand deposit account of the customer payee.

51. The system of claim 50, wherein the remote customer terminal comprises a personal computer.
52. The system of claim 50, wherein the remote customer terminal comprises a digital image scanner for data entry.
53. The system of claim 52, wherein the digital image scanner comprises optical recognition software to convert machine printed characters to electronic text.
54. The system of claim 50, wherein the remote customer terminal comprises a printer for printing receipts or marking checks.

PATENT
Attorney Docket No. 47004.000059

55. A method for allowing a bank customer to deposit the value of conventional checks into a bank account from a location that is remotely situated with respect to a bank, comprising:

- (a.) receiving conventional checks payable to a bank customer payee;
- (b.) logging the bank customer payee onto an automated banking system from a customer terminal that was previously associated with a demand deposit account of the bank customer payee, wherein the customer terminal is remotely located from the automated banking system, wherein further access to the customer terminal is controlled by the bank customer payee;
- (c.) entering transaction data into the customer terminal;
- (d.) processing the discrete value of each check for deposit by the automated banking system from the customer terminal into the associated demand deposit account; and
- (e.) receiving a result of the transaction for each check.

56. The method of claim 55, wherein the customer terminal comprises a digital image scanner comprising optical recognition software capable of convertint machine printed characters to electronic text.

57. The method of claim 56, wherein entering transaction data into the customer terminal comprises scanning the checks using the digital image scanner.

58. The method of claim 55, wherein the result of the transaction in (e.) comprises a provisional credit to the associated demand deposit account.

59. A method for allowing a bank to process check deposit transactions that are initiated by a bank customer at a remote location, comprising:

- (a.) associating a terminal with a demand deposit account of a bank customer, wherein the terminal is remotely situated from a bank, wherein further the bank customer controls the location of the terminal; thereafter
- (b.) receiving a request from the bank customer through the terminal for authorization to make a transaction using an automated banking system, wherein the terminal is remotely situated from the automated banking system;
- (c.) authorizing the bank customer payee as a user on the automated banking system;
- (d.) receiving transaction data related to the deposit of a conventional check payable to the bank customer into the associated demand deposit account, where the payor is someone other than the bank customer; and
- (e.) processing the transaction for the discrete value of each check.

REMARKS

The application has been amended in view of the Office Action dated September 11, 2001. Claims 50 through 59 have been added.

I. Information Disclosure Statement

It is stated in the Office Action that the references U20-U140, P1 and P2, which were listed on Form PTO-1449 originally filed on January 23, 2001 and resubmitted on August 8, 2001, were not received by the Examiner. Applicants have respectfully resubmitted these references on December 30, 2002. Applicants respectfully request that these references be considered at this time.

II. 35 U.S.C. § 102 Rejection

Claims 1, 10, 11, 13, 15 and 21 have been rejected for allegedly being anticipated by Riach *et. al.*, U.S. Patent No. 5,751,842 (herein "Riach") under 35 U.S.C. § 102(b). The Examiner has explained that Riach discloses a check depositing system and method comprising a remote processing terminal, connected to a data circuitry suitable for electronic funds transfer whereby the customer's bank account can be automatically credited with the monetary value of a conventional check; the customer logs on to the automated banking system using a bankcard and pin number and is authorized to continue; the customer enters information from the check into the customer terminal using a keyboard; and a funds transfer operation is effected wherein the value of the check is transferred from the payor's account to the payee's account, this process including the check clearing process. See Office Action at p. 3. The Examiner further noted that, "[t]he Riach . . . apparatus comprises an automated banking system . . . [t]he checks deposited in the Riach . . . apparatus are processed or cleared by the Riach . . . apparatus itself . . . [t]he Riach . . . apparatus also comprises a check clearing system." See Office Action at p. 5.

Applicants respectfully submit that, as amended, Riach does not anticipate the invention of claims 1, 15 and 21. Applicants have amended claim 1 to include the further limitations that the automated banking system is remotely located from the customer terminal interface, and that the check clearing system is remotely located from the automated banking system. Claims 15 and 21 have been amended to include the limitation the customer terminal is remotely located from the automated banking system. These limitations thus distinguish the invention of claims 1, 15 and 21 over Riach for at least the reason that that automated banking system and the check clearing system are separate from the customer terminal, unlike Riach where the apparatus itself comprises the automated banking system and the check clearing system.

Similarly, newly added claims 50, 55 and 59 include similar limitations that the automated banking system is remotely located from the customer terminal, thus distinguishing these newly added claims over Riach. In addition, claims 50 and 55 include the limitation that access to the customer terminal is controlled by the bank customer payee. This limitation distinguishes the Riach apparatus over the invention because the Riach apparatus is described as an ATM (automated teller machine), which does not have access controlled by the bank customer payee.

Claims 55 and 59 include limitations that the customer terminal is associated with a demand deposit account of the customer and that the discrete value of each check for deposit is deposited by the automated banking system into the associated demand deposit account. These limitations also distinguish the invention over Riach because the Riach apparatus is not associated with a customer payee demand deposit account prior to logging onto the automated banking system by the customer.

Applicants respectfully request that the 35 U.S.C. § 102 rejections of independent claims 1, 15, and 21 be withdrawn, since the cited reference Riach does not disclose each and every aspect of the claimed invention. Since the remaining claims depend from one of claims 1, 15, or 21, Applicants respectfully request that the rejection of each of these claims under § 102 for anticipation likewise be withdrawn. Similarly, Applicants submit that Riach does not anticipate any of newly added claims 50 through 59 for the reasons set forth above.

III. 35 U.S.C. § 103 Rejections

Claims 4 and 17 have been rejected as allegedly being unpatentable over Riach pursuant to 35 U.S.C. § 103(a).

Applicants respectfully submit that the invention of claims 4 and 17, as amended, are not obvious because Riach does not teach or suggest all the claim limitations in each instance. The limitations added by amendment of claims 1 and 15 (that the automated banking system is remotely located from the customer terminal interface, and that the check clearing system is remotely located from the automated banking system and the customer terminal is remotely located from the automated banking system) are not disclosed or suggested by Riach. Riach thus does not disclose each and every element of the invention of claims 1 and 15, either alone or in view of Official Notice that a personal computer can be used as a customer terminal and the step of a provisional credit being applied to a customer's account, and therefore does not disclose each and every limitation of dependent claims 4 and 17.

Applicants respectfully submit that claims 4 and 17 are not obvious in view of Riach and Official Notice, and respectfully request that this rejection be withdrawn.

CONCLUSION

Applicants submit that the application is in condition for allowance and respectfully request entry of this Amendment after Final Rejection and a notice of allowance for all the pending claims. Applicants submit a check in the amount of \$110.00 and request a one month extension of time for filing this Amendment. It is believed that no other fees are due. However, should any other fees be determined to be due, Applicants request that such fees be charged against Deposit Account 50-0206. Should the Examiner determine that any further action is

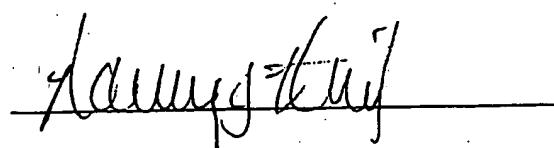

PATENT
Attorney Docket No. 47004.000059

necessary to place this application in condition for allowance, the Examiner is kindly requested and encouraged to telephone Applicants' undersigned representative at the number listed below.

Respectfully submitted,

HUNTON & WILLIAMS

APPENDIX OF MARKED-UP VERSION OF AMENDED CLAIMS

1. (Three times amended) A system for depositing the value associated with conventional checks into the bank account of a customer payee comprising:
 - an interface to a customer terminal, the customer terminal being located remotely from a bank[, the customer terminal further being selectively locatable by a customer payee];
 - an automated banking system connected to the customer terminal interface via a communication link, the automated banking system being located remotely from the customer terminal interface; and
 - an interface to a check clearing system, the check clearing system connected to the automated banking system via a communication link, the check clearing system being located remotely from the automated banking system, wherein the automated banking system is configured such that information from a conventional check is entered into the customer terminal, and wherein the automated banking system and check clearing system are configured to effectuate deposit of the discrete value of each check into an account of the customer payee.
15. (Three times amended) A method for allowing a bank customer to deposit the value of conventional checks into a bank account from a location that is remotely situated with respect to a bank, comprising:
 - (a.) receiving conventional checks payable to a bank customer payee;

(b.) logging the bank customer payee onto an automated banking system from a customer terminal that is remotely situated with respect to a bank[, wherein the customer terminal is selectively locatable by the bank customer payee] and the automated banking system;

(c.) entering transaction data into the customer terminal;

(d.) processing the discrete value of each check for deposit by the automated banking system; and

(e.) receiving a result of the transaction for each check.

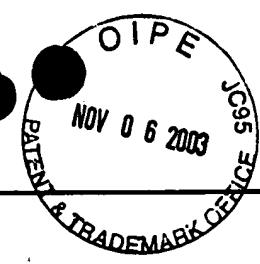

21. (Three times amended) A method for allowing a bank to process check deposit transactions that are initiated by a bank customer at a remote location, comprising:

(a.) receiving a request from a bank customer on a terminal that is remotely situated from a bank for authorization to make a transaction using an automated banking system, wherein the terminal is remotely situated from the automated banking system;

(b.) authorizing a bank customer payee as a user on the automated banking system;

(c.) receiving transaction data related to the deposit of a conventional check payable to the bank customer, where the payor is someone other than the bank customer; and

(d.) processing the transaction for the discrete value of each check.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it contains a valid OMB control number.
